

Computer Science Index (CSI) offers abstracting and indexing of academic journals, professional publications, and other reference sources at the highest scholarly and technical levels of computer science. The collection covers more than 670 periodicals and books, with coverage going back to the mid 1960s. Computer Science Index focuses on subjects such as artificial intelligence, expert systems, system design, data structures, computer theory, computer systems and architecture, software engineering, human-computer interaction, new technologies, social and professional context, and much more. Enhancements to the original database include hundreds of new titles and searchable cited references for key academic journals. This database also includes editor-selected articles from magazine and journal titles in related areas of study.
