

This project focuses on Robustness, Security, and Scalability of Internet Routing Infrastructure, in particular, the Border Gateway Protocol (BGP). The aim of this project is to design, standardize, test and foster commercial deployment of new technologies and techniques to improve the security, robustness and scaling of core Internet infrastructure.

Institute/Organization: Information Technology Laboratory (ITL) , National Institute of Standards and Technology (NIST) , USA

Research Team: Kotikalapudi Sriram, kotikalapudi.sriram@nist.gov

Status: Ongoing
